

JOIN AN INTERNATIONAL PROJECT TEAM FOR SUMMER SEMESTER 2025!

TECHNOLOGY IN A SMART SOCIETY

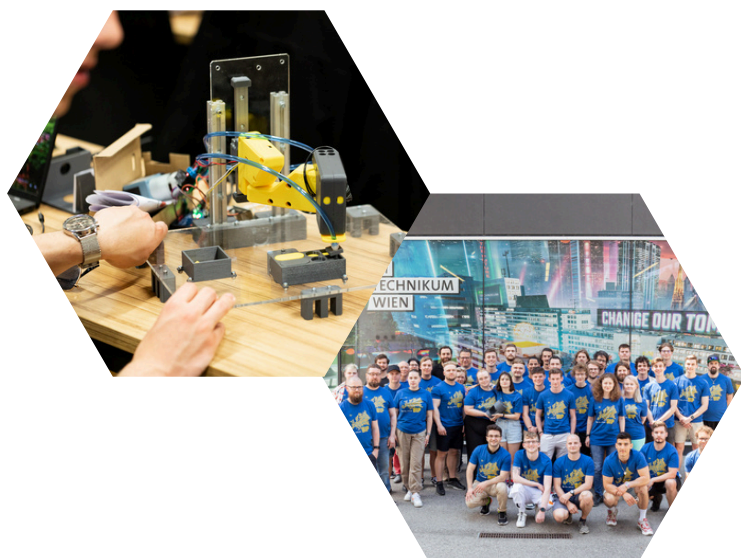

Funded by
the European Union

What are problems in our society – in sectors such as agriculture, infrastructure, transportation, healthcare and more – and how can they be solved with technology, informatics and robotics?

Join us for a Blended Intensive Programme and work with students from Austria, Finland and the Netherlands in international project teams to develop solutions for application in everyday life! Together with your team you will

- find a problem in our modern society
- formulate a possibility to solve the problem
- and create a show-case of your solution.

After an initial week in the Netherlands where you will meet your team mates, get input on topics such as robotics, digital twin or node-RED, and create the basis for your project, you will work together virtually during the summer term 2024 until the on-site week in Vienna, where you will present your final results.

Online-kick-off:

January, 2025

Kick-off in Eindhoven, NL:

February 24 - 28 , 2025

Wrap-up in Vienna, AT:

May 12 - 16, 2025
